

CLAIM or CLAIMS

What I claim as my intentions are:

1. Idea of a system for facilitating an order-delivery service via interactive systems comprising: at least one of a TV set and cable box, or a TV set and satellite dish network box; a menu for allowing customers to access a restaurant to order and receive a fast delivery; and a remote control device for the one of the TV set and cable box, or the TV set and satellite dish network box.

2. (new) An order-delivery system via interactive systems that will allow potential customers to access menus of fast food restaurants, other vendors and dining places, any products or other goods, using a remote control device of at least one of a TV set, a TV set and a cable box, a TV set and a satellite dish network box, a PDA or a pocket PC.

3. (new) To make the system usable, my invention requires only one device to transfer an analog signal to digital. This device does not require being incorporated into every cable box. As a current common practice in many hotels, up to four C-changer devices are installed to service the entire building to convert analog signals into digital ones. Same C-changers will be used to accommodate my invention.
